Embryonaltoxikologie
Charité - Universitätsmedizin Berlin

Mercredi, 24 septembre 2014

Pavillon Jean-Coutu

12h00 – S1-125

À l'invitation du professeur Ema Ferreira

Exploring the methodological aspects of studies from teratology information services, namely the strengths of TIS-based prospective studies, the issues surrounding the recruitment, and the sources of potential bias. We are especially interested in ethical aspects of recruitment and in the practical aspects such as the organization of work and the workload required for the systematic monitoring of women exposed to drugs.
